Location

California Endemic No

Counties

Madera (MAD), Mariposa (MPA), Tuolumne (TUO)

States

California (CA), Colorado (CO), Idaho (ID), Montana (MT), Oregon (OR), Utah (UT), Washington (WA), Wyoming (WY)

Quads

Dunderberg Peak (3811913), Vogelsang Peak (3711973)

Notes

Definitions of codes preceding a county and/or quad:

* Presumed extirpated

(*) Possibly extirpated

Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

Notes

Discovered in CA by Alison Colwell in the vicinity of Yosemite NP. Potentially threatened by hydrological alterations caused by logging activities. Easy to identify due to two nearly identical sporophores and no trophophore; other *Botrychium* spp. will occasionally produce a spore-bearing trophophore, but the two leaf segments are generally not identical. Not in *The Jepson Manual* (1993). See *American Fern Journal* 71(1):20-30 (1981) for original description, and 85(4):375-394 (1995) for taxonomic treatment.
