Notes

Definitions of codes preceding a county and/or quad:

- * Presumed extirpated
- (*) Possibly extirpated

Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

Notes

Move to List 1B? Reduced by vernal pool habitat loss; threatened by vehicles, grazing, development, and agriculture. Taxonomic problems; distinguishing between this taxon and *M. sessilis* (= *M. minimus* ssp. *apus* var. *sessiliflorus* in *A California Flora* (1959) by P. Munz) is difficult; are both rare? Plants in the Central Valley that resemble this taxon may be hybrids between *M. minimus* and *M. sessilis*; see *Flora of North America* 3:136 and *Evolution* 13:151-174 (1959) for details. See *M. minimus* in *TJM* (1993); not in *TJM* 2. See *Bulletin of the California Academy of Sciences* 1:277 (1885) for original description, and *Aliso* 2(4):396 (1952) for revised nomenclature.
