

## Report for *Ribes amarum* var. *hoffmannii*

### TAXON DETAILS

#### Classification

|                      |   |
|----------------------|---|
| Scientific Name      | <i>Ribes amarum</i> McClat. var. <i>hoffmannii</i> Munz |
| Common Name          | Hoffmann's bitter gooseberry                            |
| Family               | Grossulariaceae   |
| Element Code         | PDGRO02012  |
| USDA Plants Symbol   |   |
| Synonyms/Other Names |   |

#### Conservation Status

|                            |                                   |
|----------------------------|-----------------------------------|
| California Rare Plant Rank | 3                                 |
| Global Rank                | G4?T3                             |
| State Rank                 | S3                                |
| CESA                       | None                              |
| FESA                       | None                              |
| Other Status               |                                   |
| CRPR Changes               | changed from 3 to 3 on 2013-02-01 |
| Date Added                 | 1984-01-01                        |
| Last Update                | 2023-10-03                        |

#### Ecology and Life History

|                      |                              |
|----------------------|------------------------------|
| Lifeform             | perennial deciduous shrub    |
| Blooming Period      | Mar-Apr                      |
| Elevation m (ft)     | 5-1190 (15-3905)             |
| General Habitats     | Chaparral, Riparian woodland |
| Microhabitat Details |                              |
| Microhabitat         |                              |

## Threat List Data from the CNDDB

|                                |                  |                    |
|--------------------------------|------------------|--------------------|
| <b>Threat List Total:</b>      |                  | 0                  |
|                                | <b>Total EOs</b> | <b>Percent EOs</b> |
| <b>EOs with Threats Listed</b> | <b>0</b>         | <b>0%</b>          |
| <b>Threat List:</b>            |                  |                    |

## Element Occurrence Data from the CNDDB

|                                   |   |
|-----------------------------------|---|
| <b>Total Element Occurrences:</b> | 0 |
| <b>Element Occurrence Ranks:</b>  |   |
| Excellent (A)                     | 0 |
| Good (B)                          | 0 |
| Fair (C)                          | 0 |
| Poor (D)                          | 0 |
| None (X)                          | 0 |
| Unknown (U)                       | 0 |
| <b>Occurrence Status</b>          |   |
| Historical, > 20 years            | 0 |
| Recent, < 20 years                | 0 |
| <b>Presence</b>                   |   |
| Presumed Extant                   | 0 |
| Possibly Extirpated               | 0 |
| Presumed Extirpated               | 0 |

## Location

---

**California Endemic** Yes

---

### **Counties**

---

San Diego (SDG), Santa Barbara (SBA), Ventura (VEN)

---

### **States**

---

California (CA)

---

### **Quads**

---

Carpinteria (3411945), Julian (3311615), Point Conception (3412044), Santa Barbara (3411946), Santa Ynez (3412051), White Ledge Peak (3411944)

---

### **Notes**

Definitions of codes preceding a county and/or quad:

\* Presumed extirpated

(\* ) Possibly extirpated

Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

## Notes

Move to List 1B? Location, rarity, and endangerment information needed. Expected to only occur in the Santa Ynez Mtns., but plants are also recorded from the San Rafael Mtns. Taxonomic distinctiveness from *R. amarum* is uncertain; needs further study. Possibly threatened by non-native plants. A synonym of *R. amarum* in *TJM* (1993) and *TJM 2*.
