Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

## Notes

Move to List 1B? Field surveys needed. Known in CA only from the Klamath Range. Very difficult to distinguish from *S. asprella* and *S. glaucescens*, especially in herbarium material; needs further study. See *Clybele Columbiana: A Series of Studies in Botany, Chiefly North America* 1(1):35-36 (1914) for original description.
