**General Notes**

Similar to, and sympatric with, *N. intertexta*; also similar to *N. paradoxinota*, but the two are wholly allopatric with no signs of intergradation. Differentiated from both similar species in having larger corolla lobes that generally exceed all calyx lobes; also differentiated from *N. intertexta* in having anthers that reach but do not exceed corolla tips. See *Phytotaxa* 91(2):27-38 (2013) for original description.
