### **Notes**

Definitions of codes preceding a county and/or quad:

\* Presumed extirpated

(\*) Possibly extirpated

Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

## Notes

Distinct from other *C. foliosus* vars. in leaf vestiture, with abundant hairs on abaxial leaf surfaces and young stems that

often form a dense mat, obscuring tertiary venation (vs. glabrous or usually sparse abaxial hairs when present in other vars.). Similar to *C. tomentosus*; differentiated by undulate leaves with lamina that are often folded lengthwise (vs. plane margins with lamina that are flat in *C. tomentosus*). See *Systemic Botany* 42(3):529-542 (2017) for original description.
