(’) Possibly extirpated
Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

Notes
Discovered in CA by Marla Knight in 2007. Possibly threatened by grazing, trampling, vehicles, and recreational activities. Similar to Torreyochloa pallida var. pauciflora; differs in having leaf sheaths closed at least part of the way, vs. leaf sheaths open (with overlapping margins) to the base in T. pallida. See Species Plantarum 1: 64 (1753) for original description, and Essai d’une Nouvelle Agrostographie 97 (1812) for revised nomenclature.
