## Notes

Definitions of codes preceding a county and/or quad:

\* Presumed extirpated

(\*) Possibly extirpated

Species may be present in other areas where conditions are favorable. These data should NOT be substituted for pre-project review or for on-site surveys.

## General Notes

Possibly threatened by horticultural collecting. Previously identified as *S. obtusatum* ssp. *boreale*, in part. Similar to *S. oregonense*; differs in having dense rosettes and waxy granules on calyxes and inflorescence branches vs. looser rosettes and lacking waxy granules in *S. oregonense*. See *Phytotaxa* 368: 1–61 (2018) for original description.
