

**Considered But Rejected: *Arceuthobium abietinum* ssp. *wiensii***

Aaron E. Sims  
January 20, 2017

**Background**

Proposed for addition on 8/27/2012; likely overlooked by botanists for many years, common host is red fir, slight tax diff. from other *Arceuthobium* taxa, difficult to obtain for ID, and not likely to ever be fully eradicated. Rejected for inclusion at this time for these reasons.

**Inventory Record**

*Arceuthobium abietinum* ssp. *wiensii*

CBR: Likely too common; its common host specificity for *Abies magnifica*, slight taxonomic differences from other *Arceuthobium* taxa, and difficulty to get in hand for identification, all suggest that it is likely too common for inclusion at this time.
