

Rare Plant Status Review: *Hymenopappus filifolius* var. *eriopodus*
Kristi Lazar (CNPS) and Roxanne Bittman (CNDDDB)
November 27, 2006

Background

Hymenopappus filifolius var. *eriopodus* is a perennial herb in the Asteraceae. This species is known in California from approximately 4 occurrences in eastern San Bernardino County. However, these 4 occurrences are restricted to the north side of the Clark Mountain Range and to the New York Mountains (Keystone Canyon, Caruthers Canyon, 4th of July Canyon). This species is also known from southern Nevada and western Utah. *H. filifolius* var. *eriopodus* is included in *The Jepson Manual* and the *Flora of North America*. The habitat of this species is on limestone outcrops in pinyon and juniper woodlands from 1600 to 1700 meters in elevation. This species flowers from May through July. There are no major threats to *H. filifolius* var. *eriopodus* in California at this time.

H. filifolius var. *eriopodus* is currently known in California from 4 occurrences in San Bernardino County and requires review for inclusion in both the CNPS Inventory and the CNDDDB.

Recommended Actions

CNPS: Add to CNPS List 2.3

CNDDDB: Add to CNDDDB as G5T3 / S1.3

Please review the draft CNPS Inventory record below, respond Yes or No on the proposal to add this species to the Inventory and CNDDDB, and provide any edits/comments. If responding No, please provide supporting information.

Draft CNPS Inventory Record

***Hymenopappus filifolius* Hooker var. *eriopodus* (A. Nelson) B.L. Turner**

Asteraceae

“fineleaf hymenopappus”

List 2.3

San Bernardino; Nevada, Utah

225D [Ivanpah/3511533], 249D [Clark Mtn./3511555]

Pinyon and juniper woodlands / carbonate; elevation 1600-1700 meters.

Perennial herb, blooms May-July.

See *Bot. Gaz.* 37: 274 (1904) for original description and *Rhodora* 58: 225 (1956) for revised nomenclature.
